

### ***Partnership***

***The close connection with the project and construction practices is based on the educational philosophy of GTU architecture, urban and design faculty.***

Companies enhance their intellectual and creative potential in cooperation with talented young people, while the faculty's educational programs retain their significance and effectiveness. The goal of cooperation is to equip the students with practical experience in solving various real objectives. To achieve this outcome, GTU architecture, urban and design faculty cooperates with various companies. The faculty partners are the municipalities of the regions of Georgia, architectural services of regional city halls of Georgia, architectural companies, design studios.

Partnership allows us to develop educational programs based on industry requirements and provide students with an opportunity to provide effective learning and practice. The students will gain experience for real tasks through the contact with professionals. The relationship is carried out in different formats: the realization of student projects, organizing training practices, organizing lectures, master classes and practical exercises. Our partners are directly involved in the learning process. This form of cooperation diminishes distance between the industry's real demands and creative education.
